smart-level Lab

The smart-level is a unique instrument developed for measurements in single and multi-phase liquids, emulsions, froths, slurries, oil/water mixtures, sediments and bioreactors. The smart-level lab is a version of the instrument which is particularly suited to laboratory and research applications and is presently available with measurement lengths of 150, 400 and 800 mm. (Other lengths up to 2 metres can be made on request).
